By the end of this lesson, I will be able to:

- Generate equivalent fractions by multiplying both the numerator and denominator by the same non-zero number.
- Generate equivalent fractions by dividing both the numerator and denominator by the same non-zero number.

1. Generate Equivalent Fractions by Multiplication

1a

TEACHER: LEARNING

Owlie and Teddy ate the same quantity of pizza because $\frac{1}{2}$ and $\frac{2}{4}$ show the same portion of the whole pizza.

Owlie : $\frac{1}{2}$

Teddy : $\frac{2}{4}$

So, $\frac{1}{2}$ and $\frac{2}{4}$ are equivalent fractions.

Owlie wants to find a few equivalent fractions of $\frac{2}{3}$.

Click Play!

Write any 3 equivalent fractions of $\frac{2}{3}$ that you found above.

In the simulation above, you saw how $\frac{1}{2}$ can be written as different fractions.

When the slider was at 2, the fraction became $\frac{\square}{\square}$.

TEACHER: LEARNING

When the slider was at 4, the fraction became $\frac{\square}{\square}$.

Correct Answers:

1 $\frac{4}{6}$.

2 $\frac{6}{9}$.

3 $\frac{8}{12}$.
